**The perfect palletizing solution
for climate-sensitive products**

Gardien the Protector Pallet Netting

The perfect palletizing solution for climate-sensitive products

Syfilco's Gardien the Protector Pallet Netting is a tough and rugged knitted polyethylene wrap designed for holding temperature-sensitive pallet loads. The open mesh design offers unrestricted air flow around the pallet load – minimizing damage or product spoilage caused by trapped condensation or rapid changes in temperature.

Syfilco has gained the knowledge, with more than 30 years' experience, to manufacture high quality products. We strive to provide the best service, quality assurance and customer satisfaction.

Advantages of Pallet Netting

- No restriction to air flow
- Performs well in all temperatures
- Labels and printing remain visible
- Retains load during transit
- Easily tied off – no need for clips or fasteners
- Compact for disposal or recycling
- Reduces spoilage due to condensation

Product Sizes

Size	Rolls/ Carton	Rolls/ Skid	Approx. Weight/Roll	Application
20"x2500'	4	72	2.7 kg/5.9 lb	Hand
20"x5000'	–	50	5.3 kg/11.8 lb	Machine
20"x10,000'	–	40	10.7 kg/23.6 lb	Machine

NOTE: All sizes are manufactured onto a 3" id core.

Costing Factors

Wrapping a 4 x 4 x 4 ft. pallet using double wrap top and bottom, with a 50% overlap requires approximately 120 ft. of netting per pallet. Each 2500 ft. roll will wrap 20 - 22 pallets.

When comparing your cost per pallet using stretch film versus pallet netting, be sure to include the cost of any product spoilage and rewrapping due to moisture entrapment.
